

CHIEF

CYBERSECURITY HUBS

INTEROPERABILITY AND COOPERATION FRAMEWORK

Project

CHIEF is a 36-months lasting European funded project (January 2026 - December 2028), poised to enhance collaboration in the Cybersecurity domain across Europe by improving information sharing frameworks, interoperability, and governance between Security Operations Centers (SOCs), starting with National Cyber Hubs.

Objectives

Structuring **cooperation among National Cyber Hubs**, to serve as a basis for more cross-border information exchange and the involvement of other relevant Hubs at all levels.

Fostering **public private cooperation**, leveraging industry expertise to improve threat detection, response, and resilience. Strengthening partnerships to enhance collective security.

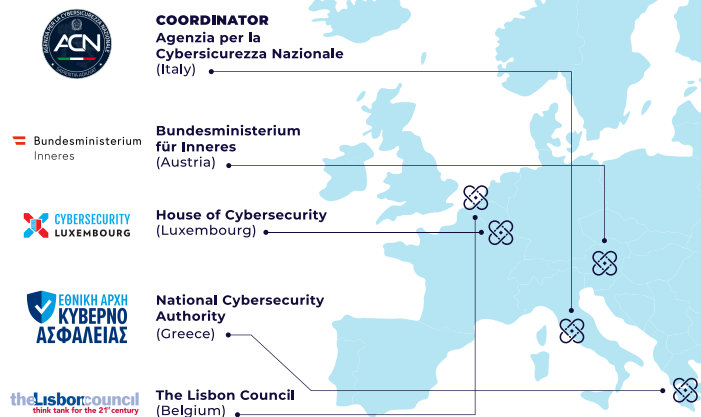

Identifying potential solutions for **integrating emerging technologies with a focus on HPC and AI into Security Operations Centers (SOCs)**, so to increase their efficiency and capabilities.

National Cyber Hubs

Member States' designated entities, with the capacity to act as a reference point for other public and private organisations at national level for collecting and analysing information on cyber threats and incidents and to contribute to a Cross-Border Cyber Hub. They can detect, aggregate, and analyse data and information relevant to cyber threats and incidents, such as cyber threat intelligence, using state-of-the-art technologies to prevent incidents.
